Health Care Center in Madagaskar

The installation of solar energy systems with battery storage provides reliable electricity to health centres of different sizes. It replaces the diesel generators which causes the reduction of local air pollution and greenhouse gas emissions. The access to a reliable electricity supply significantly improves medical care. Vaccines and medicines can be safely refrigerated, and emergency treatments can be carried out under adequate lighting at night. The project also enables health centres to expand the range and quality of the services they provide.

atmosfair operates its projects according to the Clean Development Mechanism (CDM) outlined in the Kyoto Protocol as well as the "Gold Standard" established by international environmental organisations.
